The prospectus should be read carefully before investing. HCM Dividend Sector Plus Fund is distributed by Northern Lights Distributors, LLC, member FINRA/ SIPC. Northern Lights Distributors, LLC and Howard Capital Management, Inc. are not affiliated.

Risk Disclosure

Mutual funds involve risk including possible loss of principal. When the Fund is out of the market and in cash or cash equivalents, there is a risk that the market will begin to rise rapidly and may cause the Fund to miss capturing the initial returns of changing market conditions. The mutual funds in which the Fund may invest may use leverage. Using leverage can magnify a mutual fund's potential for gain or loss and therefore, amplify the effects of market volatility on a mutual fund's share price. The Fund may be subject to the risk that its assets are invested in a particular sector or group of sectors in the economy and as a result, the value of the Fund may be adversely impacted by events or developments in a sector or group of sectors. The price of small or medium capitalization company stocks may be subject to more abrupt or erratic market movements than larger, more established companies or the market averages in general. A higher portfolio turnover will result in higher transactional and brokerage costs and may result in higher taxes when Fund shares are held in a taxable account. ETFs and mutual funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in other investment companies and may be higher than other mutual funds that invest directly in securities. The market value of ETF and mutual fund shares may differ from their net asset value. Each investment company and ETF is subject to specific risks, depending on the nature of the fund.

HCM Indicator

HCM Indicator. The HCM-BuyLine® (Indicator) our proprietary indicator is used to assist in determining when to buy and sell securities. When the Indicator identifies signs of a rising market, HCM then identifies the particular security(ies) that HCM believes have the best return potentials in the current market from the universe of assets available in each given model and signals to invest in them. When the Indicator identifies signs of a declining market, the Indicator signals to move clients' investments to less risky alternatives. Not every signal generated by the Indicator will result in a profitable trade. There will be times when following the Indicators results in a loss. An important goal of the Indicator is to outperform the market on a long-term basis. The reason is the mathematics of gains and losses. A portfolio which suffers a 30% loss takes a 43% gain to return to the previous portfolio value. The Indicator is a reactive in nature, not proactive. They are not designed to catch the first 5–10% of a bull or bear market. Ideally, they will avoid most of the downtrends and catch the bulk of the uptrends. There may be times when the use of the Indicator will result in a loss when HCM re-enters the market. Other times there may be a modest positive impact. When severe downtrends occur, however, such as in 2000-2002 and 2007-2008, the Indicator has the potential to make a significant difference in portfolio performance. Naturally, there can be no guarantee that the Indicator will perform as anticipated. The Indicator does not generate stop-loss orders that automatically sell securities in the portfolio at a certain price. As a result, use of the Indicator will not necessarily limit your losses to the desired amounts due to the limitations of the Indicator, market conditions, and delays in executing orders.
